

Twonky Ref App 8.0.3

Twonky Ref App Android

Bug Fixes

- backward skipping works now also in non-random queue modes
- downloaded items are now visible after move or upload
- fixed problem when user enabled aggregation while also disabling all shares
- fixed queue behavior when removing previously played items from queue
- pause and seek options work now when beaming to Samsung TV
- playback is now stopped when the queue is cleared; fixes inconsistent behavior
- seek bar now disabled when it's not possible to seek in the renderer
- seek bar now disabled when it's not possible to seek in the renderer
- upload no longer fails on wrong DLNA flags
- volume controls are now disabled when renderer returns an error for `getVolumePercent()`
- keep database after upgrading application on Android whenever possible

Known Issues

- sometimes pause does not work when beaming DLNA content to Sony TV

Twonky Ref App iOS

New Features

- state preservation and restoration for DMR control UI and for content browsing use cases

Bug Fixes

- backward skipping works now also in non-random queue modes
- seek bar now disabled when it's not possible to seek in the renderer
- upload no longer fails right away on wrong DLNA flags
- "Select all" option now really selects all items
- clients are now enabled by default, allowing all clients now to access content shared by the reference app
- download manager no longer uses a hardcoded secure storage path

Known Issues

- sometimes pause does not work when beaming DLNA content to Sony TV
