Twonky Ref App 8.1.0

Twonky Ref App Android

Development Environment

Please note that the Twonky SDK for Android now requires Android Studio (no longer Eclipse) as a development environment, which is now state of the art for Android development. For further details please have a look at the latest developer guide.

New Features

- bookmarking use case
- support for SSO use cases
- audiobooks support

Improvements

- added about screen

Bug Fixes

- "cannot load data" was displayed in list items
- Facebook pictures slideshow didn't work
- fixed a problem that the app stoped responding when user enabled aggregation while also disabling all shares
- fixed that the app crashed after repeated playback
- fixed that the server version is displayed incorrectly in reference app
- modifying metadata did crash the app
- shared items display was incorrect

Known Issues

- DTCP content playback stops when user performs seek
- DTCP content playback stops when user resumes paused playback
- deleted SSO account does not expire in secondary device without restart
- downloaded DTCP content appears greyed out in local servers library
- local renderer setting remains disabled after setting it private in general settings on Android
- local video is shown with wrong aspect ratio
- pause does not work when beaming DLNA content to Sony TV
- seeking forward to the end of the song stops playback on Apple TV
- user cannot play content from queue while a content is already being played
- user cannot resume to play the content after sleep
- volume cannot be controlled when content is beamed to Samsung TV

Twonky Ref App iOS

New Features

- support for SSO use cases
- audiobooks support

Improvements

- added a new twonkyDMRControlData class to unify queue loading sample code
- added new volume slider and mute controls

Bug Fixes

- Flickr video playback fixed
- fixed that Clear Queue button invoked online service
- fixed that deleting a video from queue list view didn't remove the video from DMR view
- user could no longer highlight several items in Queue view
- view now returns to DMR control view when picking any item from Queue
- when device was held vertically, a blank strip appeared at the bottom of the screen when the user goes from Queue to Local Renderer
- when selecting a different renderer view didn't return to DMR control

Known Issues

- DTCP content playback stops when user performs seek
- DTCP content playback stops when user resumes paused playback
- deleted SSO account does not expire in secondary device without restart
- pause does not work when beaming DLNA content to Sony TV
- seeking forward to the end of the song stops playback on Apple TV
- user cannot play content from queue while a content is already being played
- 'Shuffle' and 'Repeat' icons available when image slideshow is beamed
- DMR control shows black screen while playback continues when leaving video view and coming back to it
- DNLA content duration doesn't update correctly
- app crashes when it downloads a content after sleep
- app freezes if user taps [Select All] and [Clear Queue] continuously
- removing account will not remove online items from queue list
- shuffle doesn't work with Facebook content
- shuffle is not working when beaming content from DLNA server
- state restoration is broken in iOS 8.3
- when iPhone goes to sleep queue list gets cleared
- wrong status for download after app resumes
