Twonky Server 7.1.5

Bug fixes

- Fixed a bug for clients that have the FORCE_FOURTH_FIELD quirk (UPC STB, Samsung TV). The OP flag for NON-DLNA content was missing. With this back in place .mov (and other) videos play trick modes (pause/ffw/frew) for NON-DLNA content.

Twonky Server 7.1.4

Customer specific release; no public change log.

Twonky Server 7.1.3

Improvements

- Added video .ogg support

Bug fixes

- Fixed a bug when client entries were duplicated in the client list
- Fixed the DLNA profile for WMV9 video/WMA
- Fixed a bug when the embedded album art in mp3 files is png

Twonky Server 7.1.2

Improvements

- *.flv or *.f4v container with MP3 content are now correctly recognized as audio.

Bug fixes

- Fixed a problem for .mov videos where sometimes the resolution was wrong
- MacOS versions are signed now

Twonky Server 7.1.1

New Features

- Added PIFF support: .isma and .ismv file extensions
- Added support for MP3 included in in FLV/F4v container

Improvements€

- Improved subtitle support (.srt) for mpg,mkv,avi,wmv files. Please note that you have to make a database rebuild if you add subtitle files after content file.

Bug fixes

- Fixed: Aggregation feature
- Fixed a problem with .mp4 videos that caused high CPU-usage
- Fixed a performance issue when trying to share a non-existing location
- Fixed high Resolution icon support for TwonkyServer
- Fixed a problem with saving username & password on the web UI
- Fixed a bug for myTwonky's myFavoritePhotos; through JSON and RSS only the thumbnails were shown
- Fixed a bug for beaming audio via Airplay
- Fixed the whitelisted directories for MacOS

Known Issues

- If a shared folder option is set to "Video" only .mp4-videos (and maybe other container formats) are not detected and therefore not shown in the shared media items. As workaround: Set the shared folder option to "All content types".

Twonky Server 7.1

New Features

- Added Airplay support for Beaming(Airplay support not available on Linux)
- Added auto-update for TwonkyServer
- Added auto-update for device-database
- Added Bookmarks / Crosslinks

Improvements

- Improved speed for browse and search requests for scaled images
- Added ability to upload playlists from files
- Improved support for "Netgear EVA91x0"
- Improved support for "Naim Audio Streamer"
- Improved aggregation performance
- Improved handling of embedded album art and of embedded thumbnails
- Improved mpeg handling for some Sony devices
- Improved YouTube handling
- Improved interoperability with some Samsung TVs
- Improved sharing options for mobile apps
- Improved settings pages

Bug fixes

- Fixed a problem when trying to create a new user for "sync"
- Fixed a problem with the duration display for videos from myTwonky.com
- Fixed a problem when MP3 files were tagged with ID3 v.2.3.0
- Fixed a problem with default album art
- Fixed thumbnail display for .mp4 files on Sony PS3
- Fixed a server restart issue when changing the language settings
- Fixed Most Viewed and Last Viewed playlist and slideshow misbehavior
- Fixed a problem when more than one external drive is attached and the server is restarted
- Fixed a problem for Mac OS that disabled automated server restart after changing myTwonky.com username
- Fixed a problem that made the advanced menu inaccessible after changing the language settings
- Fixed a problem with the Twonky shortcut and myTwonky.com where TwonkyServer did not start and myTwonky.com page did not open after installation
- Fixed language setting problems for Netherlands.
- Fixed some wakeup problems when the system running TwonkyServer was on hibernate or sleep
- Added some missing translations (CHS,CHT,KO,FI)
- Fixed a problem with embedded album art for WD TV Live.
- Fixed a problem where the last shared folder couldn't be removed via web settings page
- Fixed a problem when there were more than 20 nested folders
- Fixed a problem for Philips TVs (e.g. Models 7605, 8605) with streaming DivX/Xvid
- Fixed a problem where the initial child count was displayed incorrectly

Other changes

- New terms of service (TOS)

Known Issues

- Aggregation feature is not working as intended. The fixed feature will be available for 7.1.1
